Accurate Partitions
Statement Concerning Use of Hazardous Materials

Accurate Partitions Corp. manufactures toilet partitions from various materials including stainless steel, galvanealed steel, high-density polyethylene, phenolic, and plastic laminate.

These partitions are not manufactured using asbestos or hazardous materials and pose no health hazard in normal storage or use. This includes all of the various hardware components, base metals, honeycomb core, glue, polymers, particleboard and finishes.

Hazard Communication – Materials Safety Data Sheets

Under the guidelines set forth by OSHA, partitions manufactured by Accurate are classified as “Articles” as defined in the Hazard Communication Standard, Sections 1910.1200© of the General Industry Standard 29 CFR 1910:

“a manufactured item other than a fluid or particle: (i) which is formed to a specific shape or design during manufacture; (ii) which has end use function(s) dependent in whole or in part upon its shape or design during end use; and (iii) which under normal conditions of use does not release more than very small quantities, e.g., minute or trace amounts of a hazardous chemical and does not pose a physical hazard or health risk to employees.”

As detailed in 1910.1200(b)(6), OSHA’s guidelines do not apply to "Articles" and, therefore, there is no requirement for Material Safety Data Sheets for our partitions.
